

I STRONGLY support airborne cell phone use on GA aircraft. I DO NOT support its' use on transport category aircraft. The FCC reasoning that I might "disrupt cell phone users" on the ground is ridiculous. As a pilot AND a mountain climber, I consistently find myself on top of mountains with others using cell phones, looking DOWN at the aircraft flying thousands of feet below. If the FCC is going to insist that high altitude cell phone use may disrupt other "ground based" users, then it should also outlaw cell phone use on mountain tops. Certainly with the amount of people on Colorado's mountains exceeding potential GA cell phone use in the same area, if high altitude use was going to disrupt transmissions, you would have heard about it by now. I have personally stood on a single summit on a single day with over 20 other cell phone users, at an altitude of over 14,000 feet, which is MUCH higher than most non-pressurized aircraft can be found flying. Thank you.
